

How to Set Up GitHub and Google Colab for Machine Learning for Bioengineering@UNIBO 2025-26

Initial setup (one-time only)

Follow these steps before your first access:

1. **Create a Google account** [here](#) (if you don't already have one). You can use Gmail or any other email provider.
2. **Register for a GitHub account** [here](#) if you don't have one. *(Your Google and GitHub accounts do not need to use the same email.)*
3. **Submit your GitHub username** (not your password!) to Professor Stefano Diciotti by filling out [this form](#).
4. **Open Google Colab** [here](#), create a new notebook, and enable the “**private repository**” option.
5. **Wait for an email invitation** to join the Machine Learning for Bioengineering repository.
6. **Accept the invitation** to gain access.

Accessing the Machine Learning for Bioengineering repository (every time you use it)

Once you've completed the setup, follow these steps each time you need to access the repository:

1. **Sign in to Google** with your Google account.
2. **Sign in to GitHub** with your registered account.
3. **Open the Machine Learning for Bioengineering repository** [here](#).

Troubleshooting access issues

If you experience any issues accessing the repository, check the following:

1. Ensure you have completed **Step #4** in the Initial Setup section.
2. Confirm that you are **signed into Google** with the correct account.
3. Verify that you are **signed into GitHub** with the correct account.

For further assistance, feel free to contact Professor Stefano Diciotti.
